

OVERA CAESAR

Software Developer — PHP / Laravel | Backend & Full Stack

Bogor, West Java, Indonesia | +62 895-3213-7413 | caesarovera@gmail.com | linkedin.com/in/overa-caesar | github.com/caesarovera
Open to remote and onsite roles | UTC+7

SUMMARY

PHP Developer with 7+ years of experience as a Backend and Full Stack Developer in digital media (MNC Group) and port logistics (ILCS). Builds web applications with Laravel and CodeIgniter, RESTful APIs, and MySQL, PostgreSQL, and Oracle (PL/SQL) databases. Handles the work end to end, from database design and unit testing to deployment with Docker and CI/CD (GitHub Actions). Looking for a Senior PHP / Laravel Developer or Senior Backend Developer role.

SKILLS

Languages & Frameworks: PHP 8.x (OOP), Laravel (up to v12), CodeIgniter 3, CakePHP, WordPress, MVC, Design Patterns, Clean Code

Backend & API: RESTful API, JSON, Web Services, Laravel Sanctum, Queues & Jobs, Redis

Frontend: Vue.js (Vue 3), JavaScript (ES6+), HTML5, CSS3, Bootstrap, jQuery, AJAX

Databases: MySQL, PostgreSQL, Oracle, Oracle PL/SQL, Stored Procedures, DB Link, MariaDB, Database Design, Query Optimization, Indexing, Database Migrations

Testing: Unit Testing, Feature Testing, PHPUnit, Pest, PHPStan, Postman, Debugging

DevOps & Tools: Docker, CI/CD (GitHub Actions), Git, GitHub, Code Review, Linux (Ubuntu), Apache, PHP-FPM, Power BI

WORK EXPERIENCE

PT Integrasi Logistik Cipta Solusi (ILCS) — Jakarta, Indonesia

Software Developer | Feb 2021 – Present

Develop and maintain internal web applications for port operations at PT Pelabuhan Tanjung Priok: yard management, container operations, vessel loading and unloading, truck scheduling, and internal audit.

- Designing and building the **Truck Appointment System (TAS)**, currently in development: an API-first Laravel 12 and Vue 3 application with Sanctum authentication, using database locking and Redis to prevent double bookings when trucks reserve arrival slots at the same time. Runs on Docker in development; Pest tests and PHPStan (level 8) run automatically in a GitHub Actions CI/CD pipeline.
- Built **eAudit**, an internal audit management system (CodeIgniter 3, PostgreSQL) with multi-level approval from auditee to lead auditor, QR code digital signatures, and verifiable PDF reports. Later refactored its controllers and models to use atomic transactions and prevent race conditions.
- Maintain a vessel loading and unloading tracking application (Laravel, MariaDB). Wrote the dev-to-production schema migration runbook: idempotent migrations, a collation change analysis, and a two-phase deployment with verification queries at each step.
- Develop and maintain the data integration between the operations and billing applications, which run on separate databases, using Oracle DB Link and PL/SQL stored procedures.
- Refactored legacy SQL queries in PostgreSQL, Oracle, and MySQL and added Redis caching to read-heavy endpoints, cutting database response times by about 25%.
- Built RESTful APIs for internal systems and partners, with Postman collections as documentation so other teams could test endpoints on their own during integration.
- Introduced automated tests (PHPUnit, Pest) for core business logic and API endpoints, so releases no longer rely entirely on manual checks.
- Develop and maintain internal applications for non-container cargo operations using CodeIgniter 3.
- Built Power BI dashboards on revenue and container throughput for management.
- Work directly with the project manager to turn requirements into features, and handle testing, deployment, and release documentation independently.

PT Media Nusantara Citra Tbk (MNC Group) — Jakarta, Indonesia

Web Developer | Aug 2018 – Nov 2020

Worked on production systems for several MNC Group business units, including Okezone.com, MNCTV, Spinpay, and MNC Energy.

- Developed and maintained the internal CMS behind the Okezone.com and MNCTV news portals (Laravel, CodeIgniter, CakePHP).
- Built RESTful APIs that delivered content to front-end applications.
- Tuned MySQL and Oracle indexes and queries to keep the sites responsive during traffic spikes from breaking news.
- Worked with UI/UX and QA teams, onsite and remote, to fix usability issues before release.

EDUCATION

Universitas Muhammadiyah Sukabumi — Bachelor of Computer Science (S.Kom.), Informatics Engineering, GPA 3.52 / 4.00 | 2013 – 2017

LANGUAGES

Indonesian: Native | **English:** Professional working proficiency, strongest in writing (documentation, email, code review)
